

fresh green food, their eggs will often be small in circumference and very short. This we believe will apply to all breeds. The first laid eggs of pullets are generally very small, while the last laid eggs of a clutch of adult hens will often be no larger than the egg of a quail. Under natural conditions the Brahmas and Orpingtons produce the largest size of brown eggs, while the Minorcas and Leghorns lay the largest white eggs. Here again there is a great difference in strains of the same varieties of the same breeds. Some strains of Leghorns will produce eggs nearly as large as the average size Minorca egg; others will lay eggs not larger than the eggs of common hens. In shape too, there is great variation amongst the different breeds. The larger breeds generally produce a very long egg that is often as large in diameter as the average Minorca egg. Others of the same breed will produce a short thick bumpy looking egg. The Houdans and Leghorns produce what we have always considered the handsomest shape eggs, that is, one of good average length, broad at the base, beautifully oval and tapering to a graceful point not unlike that of the quail's egg. It was once thought, and is yet believed by many, that long slim eggs produce only cockerels, while the short round eggs produce pullets. Many experiments, however, have long since disproved this theory and it is pretty generally understood that the largest eggs of the first laid clutch will produce a greater number of cockerels than pullets while the largest eggs of later clutches will produce more pullets than cockerels. There is absolutely no rule to go by in selecting eggs to obtain either cockerels or pullets. Neither is there any rule for selecting the eggs for hatching, as to size and color. We have never been able to obtain better chicks from all large size eggs than from those of medium or even small size. In fact, we believe the size of the egg has nothing to do with the vitality of the chick to be hatched. The size of the egg depends wholly upon the breed, the feed and the amount of exercise to which the birds are subject, vitality upon vigor of ancestry.

NO CHANGE IN VENUE.

All electric concerns should have their cases tried in a circuit court.

COCKERELS FOR SALE

Single and Rose combed Brown Leghorn Cockerels for sale at from \$2 to \$5 each. Remember we can sell you Birds much cheaper now than in the spring.
